# Cold Brew Today

Innovative DeFi on BSC BEP20 Network

Up to 8% daily return and 12% referral bonus

Fully Verified and Audited Contract

**WhitePaper**

V1.0

## **What is Coldbrew?**

The BNB cold brew is a decentralized application built on the Binance Smart Chain. The game's object is to brew more, sooner and more often than other brews.

This, in turn, earns you more BNB faster. These brewing work for you tirelessly, giving you a daily average of 8% of your brewing value. The daily percentage return depends on brewing actions taken within the platform that impact the brewing efficiency rate. The brewing efficiency rate rises and falls as users brew, re-brew your earnings and sell your brewed coffee for BNB.

Once brewing is performed, they cannot be sold, and the investment made to re-brew coffee (either through brew or re-brew) cannot be taken back. However, once brewed, brewing will not stop producing yield.

## **How does this platform work?**

This platform works similarly to a financial market, where an asset has intrinsic value that is relative to the supply or demand of a said asset.

Brewing is purchased with a pre-determined currency at a price comparable to Brewer's current brewing efficiency rate. After the brewing is performed, they work for you immediately to give you the best yield on your investment for as long as possible. Like any other asset bought and sold on an open market, the brewing price will fluctuate over time, as will the brewing efficiency rate, as you re-work brewing, compound earnings, and sell profits.

To put it, the more demand for the brewing, the more they will increase in value and the more yield they will produce. Inversely, when the demand decreases, so will the value of the brewing and their daily return on investment.

## **What is the best strategy?**

The best strategy the team can recommend is to re-brew/compound for six days and drink once a week. This will increase the user's investment while increasing the daily yield earnings. This strategy has already been tried and tested by several projects and is proven effective both for the short and long term.

We recommend the tried and tested method as in it is written in the contract. Re-bake 6 days and eat 1 day a week. It will compound your investment and recieve your initial back in 6-8 weeks.

## **What prevents the devs from rugging?**

The contract is immutable. Therefore, cannot be changed or altered in any way shape or form. It is audited and verified. You can view this on [bscscan.com](https://bscscan.com) and the audit it is found on the website.

## **What happens if I always drink?**

If you always drink your daily percentage will drop dramatically and will not receive the highest daily returns. This is the anti-whale mechanism that helps so the TVL is not drained.

©COLDBREW.TODAY ©

## **Is re-brewing more often better, 2 or 3 times a day?**

Re-brewing is the same as compounding. so essentially yes. You will need to pay standard BSC gas fees for every re-brew.

**COLDBREW**  
©COLDBREW.TODAY ©

## **What are the fees?**

There is 3% dev fee taken upon ALL deposits and withdraw from brewed coffee. Standard BSC network gas fees are required for EVERY transaction made deposits, withdraws and re-brew!

**COLDBREW**  
©COLDBREW.TODAY ©

## **Is this sustainable?**

Yes, as long as there is TVL in the contract then there will always be rewards. The hungry people who eat to much get punished and get lower and lower rewards. It will last a long time the higher the TVL is.

## Terminology

### **dApp**

Digital applications that run on a blockchain network of computers instead of relying on a single computer. Because dApps are decentralized, they are free from the control and interference of a single authority.

### **Contract**

Cryptocurrencies definition is; smart contracts that execute functions on the blockchain.

### **Coffee**

The term for brewed coffee, acquired by depositing BNB into the DeFi protocol. Coffee is what earn you your accumulated rewards

### **TVL**

Total value locked (TVL) is the overall value of crypto assets deposited in a decentralized finance (DeFi) protocol – or in DeFi protocols generally

### **Audit**

An audit is a process where developers inspect the underlying code and/or algorithm that compose systems and applications.

**COLDBREW**

## **Terminology**

### **Immutable**

Immutability is the core defining feature of blockchain. The word 'immutable' means that data cannot be changed or modified by anyone after its creation.

### **Re-brew**

Re-brewing is the ability of your initial investment to generate earnings, which are reinvested with the goal of generating more BNB rewards

## **DISCLAIMER**

Funds that are used to initially brew (including re-brew) cannot be withdrawn, However, brewed beans will indefinitely work and brew coffee for you. Please use The application at your own risk
